

First Female White House Chief Information Officer - AI Strategist - Business and Personal Security Expert - Privacy Visionary

Theresa Payton

Theresa Payton is an internationally renowned expert on cybersecurity, artificial intelligence, data privacy and digital transformation. As the first woman to serve as Chief Information Officer at the White House, she made history under US President George W. Bush. Today, she advises boards, CEOs and technology leaders of international companies on how to drive digital innovation securely, protect critical business assets and harness the opportunities of emerging technologies responsibly. Before leading the White House IT organisation, Theresa Payton held senior technology positions at two major US financial institutions. After her time in Washington, she founded the cybersecurity companies Dark3 and…
